

Sliwa A., Stadler A. & Barclay D. 2024. The EAZA Felid Taxon Advisory Group and the role of its Regional Collection Plan in global felid conservation. Cat News 80, 40–41. Supporting Online Material.

Table T1. Overview of the EAZA RCP categories and their explanations.

EEP – EAZA Ex situ Programme	The taxon needs proactive management by EAZA to fulfil its specified ex situ roles. This includes programmes that require proactive management to phase out the taxon or replace it with one or more other taxa. The proactive management may not necessarily include managing a population in the EAZA region (e.g., it can involve activities by EAZA staff or TAG members to help manage an ex situ population/programme in a range state). EAZA can be the lead partner in the ex situ programme or can be a participating partner in a collaboration led by others (e.g., range state governments, NGOs, other zoo associations, etc.).
MON-T REPLw	The TAG will monitor the replacement of this taxon with one or more other taxa.
MON-T Phase out	The TAG will monitor the recommended elimination of this taxon from EAZA collections.
MON-T DNO	The taxon is currently not present in EAZA collections and it is not recommended that it be obtained in EAZA collections. Its presence/absence will be monitored by the TAG.
MON-T	The taxon is present in EAZA collections and while there is no specific role for the taxon (with associated management), there is also no active recommendation to replace or phase out the taxon. The TAG will monitor the numbers of this taxon in EAZA collections.

Table T2. Overview of Felidae (2 subfamilies, 8 lineages, 14 genera, 41 species, 80 subspecies) from Kitchener et al. 2017. Table compiled by Cat SG, modified after EAZA Felid TAG Region Collection Plan (Sliwa et al 2023).

The following table presents the revised taxonomy proposed by Kitchener et al. (2017; pages 76–77). The recognition of formerly described subspecies was based on morphological, molecular (genetic) and biogeographic traits. The number of correlated evidence depicted as a traffic light system (● valid, ○ likely valid, ● unlikely valid, ● unclear; see publication for detailed explanations and discussion for the different species/subspecies). The revised taxonomy bases on the green and (most of) the yellow subspecies; RLA = IUCN Red List Assessment (CR = Critically Endangered, EN = Endangered, VU = Vulnerable, NT = Near Threatened, LC = Least Concern), bold = published ones, italic = underway, preliminary Category; Trend (in the wild): → = stable, ↗ = increasing, ↘ = decreasing, ? = unknown. Priorities: 1 = high, 2 = medium, 3 = low, nc = not clear. [x] indicates a basic need, but unrealistic prospect. EEP = EAZA Ex situ Programme; PO = phase out, DNO = do not obtain, Mon-T = monitored by TAG, Mon-P = monitored by person; Highlighted are cells with need for action/discussion. Grey cell taxa have been added, since programmes for these not anymore recognized taxa (Kitchener et al 2017) already existed under the EAZA Felid TAG.

Cert = taxonomic certainty according to Kitchener et al. 2017.
